Introduction

This template is an app that tells you the weather of your current location.

You can check the current weather, hourly weather, and daily weather.

Screen description

1) Weather

- Related object : WeatherWForm, WeatherWESet, WeatherRSet
- This is a screen that shows the current location's weather (hourly, daily). At the top, the current climate condition and temperature are displayed. You can check the hourly and daily weather by selecting the hourly, daily tab. In the hourly tab, you can check the closest 12-hour weather (climatic condition, temperature, precipitation probability), and at the bottom, you can check information such as the current time's perceived temperature, UV index, humidity, wind strength, and visible distance. If you select the daily tab, you can find out the weather (climatic condition, morning temperature, evening temperature) within the nearest 7 days.

: It shows the current location, climate condition, and weather. It can be reloaded via the refresh button.

: This is a tab where you can check the hourly and daily weather.

: Displays the weather for the nearest 12 hours.

: It displays the current time's perceived temperature, UV index, humidity, wind strength, and visible distance information.

: Displays the weather (climatic condition, morning temperature, evening temperature) for the nearest 7 days.

Extensibility

1) simply
