Introduction

2 / 3

This is a template for managing assets. (asset = item)

You can register your own assets and record customer requests.

Screen description

1) Main

- Related object : MainWForm, MainWESet, AssetRSet

- A screen that displays a list of assets. You can see how many assets there are in total and how many of them have been assigned. When selecting a tile, detailed information can be checked, modified, and deleted.
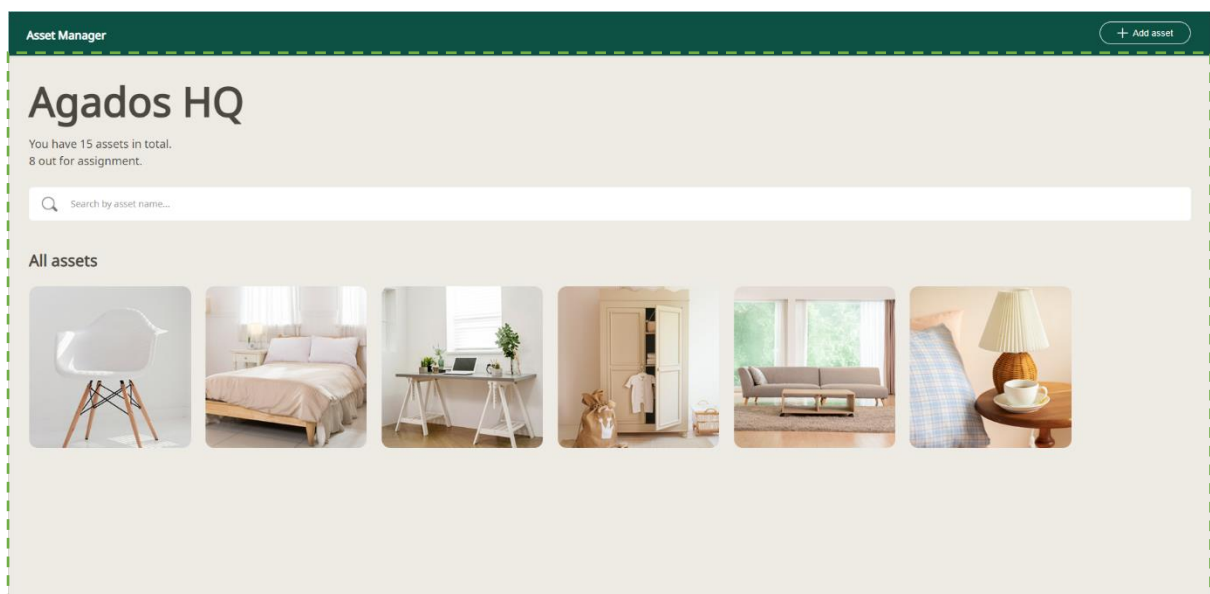

: Registered asset information (When over, the name and remaining number are displayed.). Detailed information can be checked by clicking
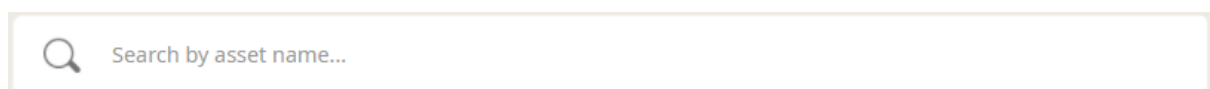

: You can search for specific assets.

2) Asset

- Related object : AssetWForm, AssetWESet, AssetRSet

- Screen for registering, modifying, and deleting assets. Shows detailed information about the asset. (Including customer request record)

 : Button to delete the asset

 : Button to save and edit asset

 : Back Button

 : Button to move to the customer request registration screen

 : Customer request record (requestor, order date, delivery date), Detailed information can be checked by clicking

3) Req

- Related object : ReqWForm, ReqWESet, ReqRSet

- This is a screen for recording, modifying, and deleting customer requests for assets.

 : Button to delete the request

 : Button to save and edit request

 : Back Button

4) MenuLayout

- Related object : MenuLayOutWForm

- Displays the title, Add Asset, and Add Request button. Display different Button Text depending on the screen

Extensibility

1) simply

- Add Asset Information (price, standard …)

- Add Request Information (delivery address, amount …)

- etc guideline

2) Difficultly

- Add warehouse information

- Inventory status by warehouse

Usability

- book management (asset = book, req = check out)
